

**Important Design Parameters**

Allowances must be made for air venting.

The under slung compressor must have an unrestricted air flow.

Proper venting must be provided ensuring cool air from the room can be drawn in through the condensing coil and out the other side.

The 'Plenum Duct' supplied should be fitted between the unit & the shop-fitted counter panels.

**Warning**

Do not install unit in draughty conditions where the air movement is greater than 0.2mtr/sec.

e.g.near entrance/exit doors, open windows, under air conditioning units or a ceiling mounted fan

Do not install units where there is high radiated heat, e.g. direct sunlight, room heaters, or bright spot lights.

Ambient room conditions must not exceed 25°C or a relative humidity of 60%.

Blocked vents will cause reduced refrigeration efficiency and lead to malfunction

Drain with valve below.  
Connect into the main drain,  
or placed a vessel under  
to catch excess water

**Important**  
Position of air intake vent  
This area must be clear for air flow

**Alternative Vent Panel Routing**
